Electronic Hand Control

The Electronic Drive-By-Wire ACCELERATOR RING is an advanced hand control driving adaption. It offers effortless, controlled acceleration, with the advantage of a natural driving position to achieve one of the most satisfying driving experiences available.

Popular with driving enthusiasts, both hands remain on the wheel meaning greater control of the vehicle and access to original accessories such as indicators, wipers, headlights, gear shifting and climate control.

- Improved vehicle control with more two-handed steering wheel operation
- One hand can temporarily control acceleration and maintain steering allowing the user to access and operate original vehicle accessories controls with the other hand
- Accompanied by PME's custom brake grip which contours to the vehicle's steering wheel and virtually level with the over ring. giving you the ultimate palm on and off style braking
- Two methods of operation; Under-ring models are finger operated and over-ring models operate with the thumbs and palm. Apply pressure at any point 360 degrees around the ring for smooth, responsive acceleration
- Quick-release ring systems available. With the press of a button the ring can be removed and refitted
- In-built safety feature cancels acceleration in the event excessive acceleration is applied simultaneously with the brake
- Blends in with the vehicle's interior to give a factory-finish look
- Can be fitted to a wide range of vehicles including high performance vehicles such as rally/race cars
- With the flick of a switch the system is switched off and vehicle can be driven conventionally
- High quality components

In working partnership with Guidosimplex and with combined experience of 70 years PME bring you the best solutions available worldwide
