

With the press of a button,

the ABI Loader escorts your wheelchair from the driver's door into the boot and gently closes the door behind.

With another press, the wheelchair is returned to your door.

All in less than 25 seconds.

The ABI Loader is the only reliable RIGID FRAME wheelchair storage system

The New Zealand made ABI Loader not only relieves your shoulders and arms of the task of lifting your wheelchair, it also ensures that the interior is clear for passengers by storing your wheelchair in the boot.

The ABI Loader is very compact and discrete. When it is not in operation your vehicle remains inconspicuous.

As it occupies very little space, the ABI Loader can be installed behind the rear seats in even relatively small cars like hatchbacks and compacts.

The ABI loader is extremely simple to use and with an operation time of less than twenty-five seconds, entry and exit from your vehicle becomes quick and easy.
