

D-TRAN

Rotating & Lowering Transfer Seat

For many transferring to a vehicle's seat means twisting, turning and climbing with high-riding SUVs making it more of a challenge.

The D-Tran system simplifies this process with innovative seat swivelling and lowering functions. This system also assists carers to transfer their passengers, making their job much easier and safer.

The swivelling function turns the seat completely out of the vehicle. The seat then lowers to the desired height to give you ample space to transfer. Once seated, the D-Tran will lift you inside the vehicle. In addition, a unique Automatic Tilt option is available to assist those with ability to stand when exiting the vehicle.

It is available as fully electric or a mix of electric and mechanical functions and optionally features a unique programmable path function to optimise leg clearance when turning. The adaptability of the D-Tran means that even SUVs and other high-riding vehicles are now an option.

- Seat with swivel, slide, drop and lift functions available as fully electric or a mix of manual and electric features.
- Automatic Tilting option to facilitate exiting and entering the vehicle
- Crash tested, flammability tested, CE marked
- Emergency manual release system to allow the user to safely exit the vehicle in case of power failure
- Independent lowering motor
- Slimline height and 20% Less weight than competitor swivel seats
- Manufactured in 100% aluminium with full attention to detail
- Keypad operated (wireless optional)
- Maximum user weight of 150kg
- Foldable footrest and complete set of covers are standard.
